

Non-Surgical Face lifting by INTRAcel ***(The future of the Anti-aging technology)***

Dr. J.C Poon, MD, FCFP, DABAARM

Beautiful One Lipodissolve and Laser Centres,
Toronto, Canada

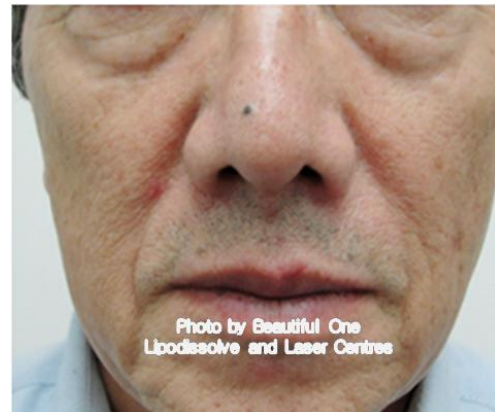

Patients are nowadays looking for more safe and effective treatment than aggressive laser treatment since many treatments by laser devices produced side effects of pigmentation and considerably long down time. INTRAcel is an alternative system for acne, acne scars, skin rejuvenation, and tightening. It enables to treat for both face and body without thermally damaging skin surface. I was able to treat patients with no complications by INTRAcel. Patients often worry about micro-needles, however skin surface is healed in a short time after the treatment. Patients could wash their face and have cosmetic make up, but need to avoid sun and cover up with sun creams. Followings photos are the clinical cases of INTRAcel treatment. Figure 1 shows significant improvement of skin texture and wrinkles

Figure 1 shows some significant improvements on fine wrinkles, scar and skin texture. Patient's face looks more bright and shiny as time goes.

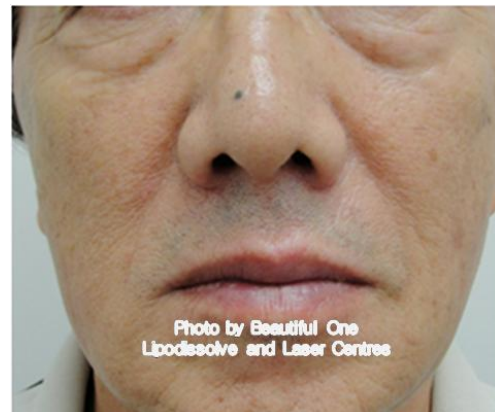

Figure 1. INTRAcel Results

Baseline

Post 1 week of 1st treatment

Post 1 week of 2nd treatment

Figure 2 is a case of female Asian patient. Her face became brighter and she was able to have tightened skin a week after the first treatment.

Figure 2. INTRAcel Results

Figure 3 is a case of male patient. His face became brighter and his wrinkles have been improved on post 2 month from the baseline.

Figure 3. INTRAcel Results

Figure 4 is a case of the neck. It was my first trial to treat a neck, and I was very surprised to see the improvement by INTRAcel as shown in the picture. I would say based on my cases that there are more possibilities of treatment in other areas by FRM technology of INTRAcel.
